

RSG - Cable Recovery - OWF in Belgian North Sea
Q4 2019 - Norther OWF & RSG

Rotech Subsea were contracted by Van Oord to provide the Hydraulic Powered RSG1 Cable Grab tool for the recovery of multiple Fibre Optic and Inter Array cables to the vessel deck. Operations were carried out at OWF in Belgian North Sea.

The RSG tool was selected by Van Oord due to its unparalleled technical and performance capabilities resulting in increased productivity and a reduction on the projects total costs.

The RSG spread of equipment was mobilised on the Olympic Taurus and deployed using the ships crane. Operations were carried out in water depths of 35m with soil conditions found to be predomincantly sands.

The RSG excelled in operations, securing and recovering over 30 different Subsea Cables with diameters ranging from 23mm to 135mm.
