

## **GALVO-STRING**

The **GALVO-STRING** is a hanging anode retrofit solution that is installed without the need for diving. GALVO-STRING anodes are simply shackled together and lowered to a desired installation depth, and can be attached to a structure with either a weld-on or clamp-on bracket. This system is ideal for structures in water depths of 3 meter (10 feet) to 100 meters (330'). Also ideal for short life extensions of 3 to 5 year duration.

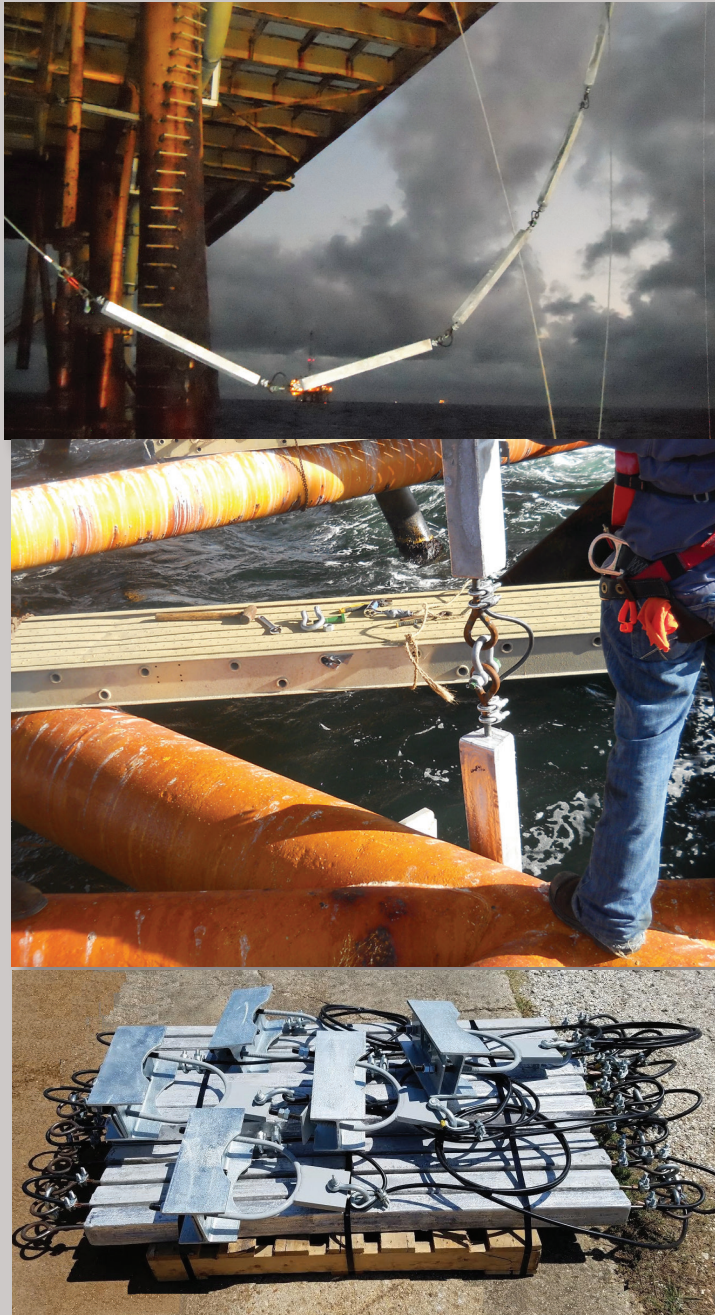

**See Videos of Installation:**
